

# WS Discovery Agent (Olive) — Performance Readout

Prepared for Felix | Week Ending May 3, 2026 | 8-Week Trend + Last Week Deep Dive | Two attribution lenses: Participation & Direct

## At a Glance

Two revenue lenses on last week: **\$292K Participation** and **\$5.3K Direct** (34 orders). Participation captures all revenue in chat-engaged visits — the halo-level view. Direct isolates revenue where Product Finding Method = salesforce chat: product recs — causally attributed. Chat visits reached 17,749, representing 0.8% of site traffic but 2.3% of site revenue. Engager CVR of 6.60% vs site 2.59% delivers a 2.5x lift, with RPV at \$16.43 vs \$5.84 (2.8x). PDP concentration remains the dominant surface at 78.5% desktop and 84.8% mobile. Mobile Customer Service page leak persists at 13.5% of mobile chat opens — a routing opportunity.

|                                                                                                                               |                                                                                                                                         |                                                                                                                             |                                                                                                                          |

## This Week's Read

- **Participation lens: engagers outperform site average across every efficiency metric.** CVR 6.60% vs 2.59% (+401 bps, 2.5x lift), RPV \$16.43 vs \$5.84 (2.8x) — Visit-to-Browse at 89.26% vs 69.25% and Browse-to-Cart at 21.3% vs 10.2% confirm the full-funnel advantage.
- **Direct lens: \$5,256 revenue from 34 orders across 654 rec-click visits at 5.20% CVR.** AOV of \$155 trails the site average of \$226 — rec surfacing skews toward mid-price items; higher-ticket curation would close the gap.
- **Visitor-level halo adds \$226K beyond the engaged-visit window.** Visitor-segment revenue of \$518K vs visit-segment \$292K shows chat influence extends well past the session in which the agent was engaged.
- **PDP dominates chat surfaces; mobile CS leak remains the largest routing gap.** Product detail captures 78.5% of desktop and 84.8% of mobile chat opens — Customer Service page absorbs 13.5% of mobile opens, diverting high-intent traffic.
- **No new launches this week; steady-state performance read.** With no platform changes or feature releases, this week provides a clean baseline for evaluating organic engagement patterns and conversion stability.

8-Week Performance Trend — Participation Lens

Revenue = all revenue in chat-engaged visits (Participation). Highlighted rows mark launch events. CVR = participation conversion; RPV = revenue per chat visit.

| Week   | Event                    | Chat Visits | Participation Rev | CVR   | RPV     |
|--------|--------------------------|-------------|-------------------|-------|---------|
| Mar 9  | —                        | 14,200      | \$195K            | 6.80% | \$13.73 |
| Mar 16 | —                        | 14,800      | \$205K            | 6.95% | \$13.85 |
| Mar 23 | Desktop PIP Q&A launched | 15,100      | \$210K            | 7.10% | \$13.91 |
| Mar 30 | —                        | 15,500      | \$220K            | 7.00% | \$14.19 |
| Apr 6  | Mobile launched          | 16,200      | \$240K            | 6.85% | \$14.81 |
| Apr 13 | —                        | 16,800      | \$260K            | 6.70% | \$15.48 |
| Apr 20 | Nudge-click bug fixed    | 17,100      | \$275K            | 6.65% | \$16.08 |
| Apr 27 | —                        | 17,749      | \$292K            | 6.60% | \$16.43 |

Engager vs Site Average — Last Week (Participation Lens)

| Metric         | Site Avg (All Visits) | Olive Engager (Chat Visit) | Lift                        |
|----------------|-----------------------|----------------------------|-----------------------------|
| Visits         | 2,146K                | 17,749 (0.8% of total)     | —                           |
| Revenue        | \$12.5M               | \$292K (2.3% of total)     | 2.8x share vs traffic share |
| CVR            | 2.59%                 | 6.60%                      | +401 bps / 2.5x             |
| AOV            | \$226                 | \$249                      | +10.2% premium              |
| RPV            | \$5.84                | \$16.43                    | 2.8x                        |
| Visit → Browse | 69.25%                | 89.26%                     | +2,001 bps                  |
| Browse → Cart  | 10.2%                 | 21.3%                      | +1,110 bps                  |

Direct Revenue — Chat-Sourced Purchases

Direct = revenue from purchases where the product was sourced via a chat action (Product Finding Method = "salesforce chat: product recs"). Causally attributed.

| Period                       | Rec-Click Visits | Direct Revenue | Direct Orders | Direct CVR | RPV    | AOV   |
|------------------------------|------------------|----------------|---------------|------------|--------|-------|
| Last Week (Apr 27 – May 3)   | 654              | \$5,256        | 34            | 5.20%      | \$8.04 | \$155 |
| LTD (Oct 11 → May 4, 30 wks) | 6,980            | \$44,398       | 239           | 3.42%      | \$6.36 | \$186 |
| Site Avg (benchmark)         | —                | —              | —             | 2.59%      | \$5.84 | \$226 |

Recipe and menu clicks generated 76 / 3 visits and \$273 / \$0 last week (LTD: 4,559 recipe visits with \$5,186 revenue, 1,003 menu visits with \$330 revenue). Recipe conversion remains marginal at 0.61% LTD — content engagement, not a revenue driver.

Forward View & Watch Items

- **WATCH | Engager CVR sustainability as chat visits scale.** CVR has moderated from 7.53% (Feb 23) to 6.60% (May 3) as visits grew 4x — expected mix dilution. Monitor for stabilization above 6.0% over the next 4 weeks.
- **ACT | Product Recs: lower AOV (\$155 vs \$226 site) — lean into higher-ticket rec surfacing.** Direct CVR at 5.20% is strong but AOV drag limits revenue per order. Curate recs toward \$250+ items to close the gap without sacrificing conversion.
- **ACT | Route mobile Customer Service intent back into shopping flow.** 13.5% of mobile chat opens land on CS pages — these are high-intent visits leaking out of the purchase funnel. An intent-detection redirect could recapture meaningful revenue.
- **CONTEXT | LTD validates the scaling thesis on both lenses.** 30-week LTD: \$44,398 Direct revenue from 239 orders across 6,980 rec-click visits (3.42% CVR). Participation lens shows \$292K weekly run-rate with 2.5x CVR lift — the engagement-to-revenue flywheel is compounding.
